Big Enough to Supply... Small Enough to Care

As cliché as it may sound, there's truth in those words. Teknaform has grown substantially since it began in 1999 but it is still owned and operated by the same people and principles that impressed customers in the first place.

Those principles are very simple ... be honest in everything you do and work hard to serve the customer – every day.

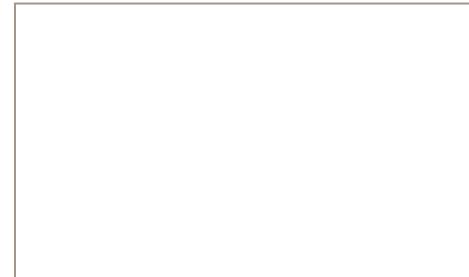

Sizes

Teknaform can produce edgebanding in virtually any size between 5/8" and 2-1/8" in width and 0.018" and 3mm in thickness. These dimensions are produced and monitored carefully to maintain tolerances that work best in all makes and models of edgebanders.

Early in 2015, Teknaform will be producing Calendared PVC Rolls approximately 6" wide. These rolls can be shipped as is, or slit to smaller widths.

Width

Rolls/Strips

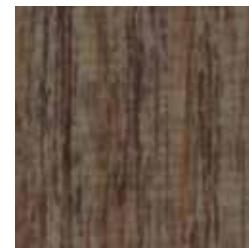

Most of our edgebanding is produced in roll form, however, we also produce strips in custom lengths, typically 7' to 10'. Rolls vary in diameter as small as 15" for .018" thick material up to 29" for the heavier 3mm banding.

Designs

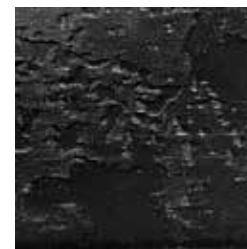

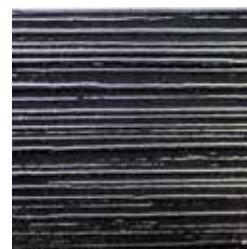

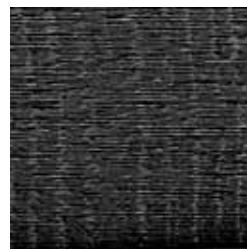

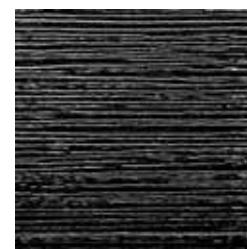

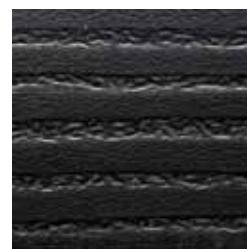

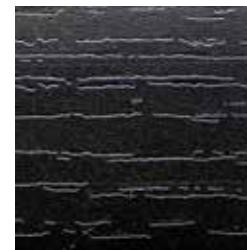

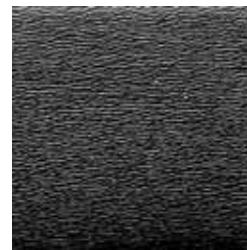

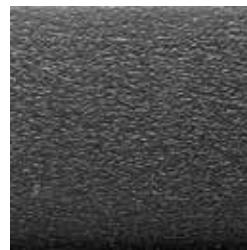

We manufacture literally thousands of different Solid Colors, Woodgrains and Patterns to match a variety of High Pressure Laminates and Thermally Fused Melamine Panels. We also also match to specialty products such as stained wood doors, painted products and Pantone specifications. Teknaform's color match expertise is second to none.

In this ever changing design world, you need a supplier who can respond with a great match and do so quickly so that you can meet the needs of your client.

Textures

We offer more than a dozen finishes ranging from smooth to heavily embossed. The use of Textures in decorative panels is increasing every day. As these textures become better and better at simulating Nature's surfaces, more natural products such as stone and wood are being converted to manmade materials such as laminate. Teknaform leads the way in providing the specialized textures needed to complete your project with the professional look you expect.

Our Service

In this area we want to differentiate ourselves from the 'Corporate' folks who sometimes trip over their own policies and red tape at the expense of giving the customer what they need, when they need it.

Information Flow

Whether it be a general question, a sample request, a quotation request or the placement of an order, our Customer Service Reps respond quickly to anyone who contacts Teknaform.

Production Lead Times

We offer a quick turnaround time for custom production which enables our customers to reduce their inventory requirements.
